

Cadac Organice Publish

*Publish your documents in
an independent file format!*

- Increase document accessibility
- Secure your documentation
- Reduce risk of unauthorized editing

*Publish documents in an independent file format
so they can easily be shared, distributed, accurately
printed, securely archived and used by others, without
the need for the native application.*

Independent file format

Cadac Organice Publish can publish documents stored in Share-Point in an independent file format so they can easily be shared and used by others. Documents are converted into an independent file format such as PDF, TIFF or DWF, so that they can be opened, viewed and annotated by others without the native application. Published documents can easily be distributed, accurately printed and securely archived for many years.

Job server

Cadac Organice Publish is initiated through a custom SharePoint workflow. Administrators can define when the workflow is triggered. The workflow is executed from Cadac Organice, but the actual file conversion is done on a dedicated job server. As a result, conversion is done fast and the load is taken away from the SharePoint server and the local workstation. Administrators are provided an Administration Site with an overview and detailed information on all jobs. For file conversion, the native application is used to assure that conversion is done accurately. The architecture is scalable, so that multiple job servers can be used, each with a specific task.

Publishing

The native and published document are stored, linked and managed in SharePoint, including their metadata. This guarantees that changes to the native document are also applied to the related published document.

Cadac Organice Publish can be initiated at any time, for instance to publish documents to any SharePoint site, document library or file share for distribution, printing, archiving (PDF/A) or to publish them to an extranet for external access.

Specifications

Cadac Organice Publish is a licensed server module and requires a dedicated job server to perform. The requirements for the job server depend on the task it needs to perform.

Cadac Organice Publish can convert the following file formats:

- Office 2003 or higher
